This shield enhances its armor and greatly improves the durability. It was the armor featured in the movie Iron Man 3, and made its debut in the movie during the start, when Tony creates it in his basement, and tests the suit's functionalities. Repulsors (Repulsion Mark II) Plasma-Penetrating UnibeamFlash-bang (unknown if 1 or 2 flash-bangs)Missiles (2)Flares Titanium, Silicon Infused Steel and Ceramic Composite PrehensibilityRemote CommandSelf-RepairAdvanced RepulsionArmor Separation UpgradeWater ResistanceRadiation ResistanceHigh Altitude and Long Distance FlightImmense StrengthAgility Prehensile TechnologyPlasma-Penetration UnibeamTactical WeaponryAdvanced Donning SystemElectromagnetism Tony: "Focus up, ladies. This also includes Remote armor control through combination of AR display headset with the Micro-Repeaters. Because of the extra energy output, this armor also has a slight energy shield that passively improves its durability. Such powerful electromagnets can be used as a ripping weapon. Tony and Harley are able to charge the suit but not fully. Donning System The Mark XLII, along with all the other newly built Mark suits, uses a more advanced technology that was based off on the Mark VII's technology, which is able to wrap itself around Tony's body, without the aid of robotic arms or any external mechanics. He finds a garage to keep it where he meets Harley Keener. The Electromagnetic Gauntlets of Mark XLII are extremely enhanced. The Mark XLII (Mark 42), known by its code name "Extremis" or the "Prodigal Son" is an Autonomous Prehensile Propulsion Suit Prototype was the forty second armor, as well as one of the many newly built suits, created by Tony Stark sometime after the events of The Avengers. This is the only suit to feature a penetrating Unibeam. Armor Features Lightweight Due the composite armor this suit is lighter than the usual Iron Man suit to help enhance its speed, agility, and prehensile systems. This tactile function was derived from Mark XLI. (maybe) but one of them didn't, to fix this problem, aim the laser ray to the controller. The Subcutaneous Implants (also known as Micro-Repeaters) in Tony's arms allow the armor to communicate with his nervous system helping the armor follow his commands. Being able to penetrate and cross through the thickest wall. Tony finds out that the suit has flown all the way to Rose Hill, Tennessee. Tactical Weaponry This armor is designed to be equipped with new Stark-based Technology. Mark 42 on the Marvel Movies Wiki. Trivia The Number 42, according to The Hitchhiker's Guide to the Galaxy, is the meaning of life. The Mark XLII's armor separation derivative is highly enhanced to be intelligently controlled, reach the user on the longest distance possible or hit a target in more powerful, swift and accurate manners. It is later used when Tony was seeing who was at his front door finding Maya Hansen. The single hand using an Electromagnetic Gauntlet can carry more than 12 people (with metallic objects such as name tags.) onto the Mark XLII. According to its description in Iron Man 3: The Official Game the suit has a self-repairing function, this may be why Tony is able to use it after crash landing in Tennessee and getting hit by a truck. It can also travel underwater like the Mark XXXVII because the armor is strong enough to withstand the crushing pressures deep under the ocean. Top reviews Most recent Top reviews Something went wrong. Despite the powerful characteristics of the armor, the Mark XLII armor in the movie is somewhat weak, this is somewhat seen during the Mark XLII's performance during the film for it being a prototype. Water Resistance The Mark XLII can also travel underwater like the Mark XXXVII because the armor is strong enough to withstand the crushing pressures deep under the ocean. Tony then uses the suit to try to fend off the Mandarin's attack. "—Tony briefing the initial completion of the Mark XLII, to his first 7 Mark Armors in the Hall of Armors. This problem was solved in Mark XLIII. Flash Bang: This armor contained a detachable flash bang, but Tony gave it away. It fell down with his house but was able to make it out of the wreckage and away from Malibu. Weaponry Repulsors: Plasma-based Particles that fuse together to create directed energy Lasers. Iron Man 3 The Mark XLII is first seen when Tony Stark is testing it in his workshop. This armor can get in the Level 5 - Rebooted Resulted, the other one being Mark I. Armor Separation Upgrade The Mark XLII is capable of separating and folding into smaller Armor Plates if Tony Stark uses remote command through the Subcutaneous Chips implanted in his arms or if it is commanded by friendly Artificial Intelligence. It is unknown what happened to the Suit after the plane crashed. It is based on the Mark XXXIX which can travel to space which gives the Mark XLII the ability to go to space too. Before Tony Stark and Harley Keener left Harley Keener's Garage, Tony Stark took a Grappling Hook from the Mark XLII. The suit is low on power and Tony has to find a way to charge it. Notice that after the unibeam was fired through Savin's chest, it went through the wall behind him and kept going. The armor also has an upgraded flight stabilizing system which enables the armor to have improved versatility during combat and precision during flight. Despite the upgrade stronger impacts forces armor pieces to separate. Extra space allows the armor to carry much more weapons whilst not affecting the overall composition and performance of this armor. The flares can be used as a weapon or as a distraction. The lasers have been enabled, one of the lasers aim to one of the panels... The Mark XLII vividly features extremely powerful Electromagnetism. It offers a much more powerful version of weaponry than most of the other previous armors. Its unibeam was shown to be capable of killing Eric Savin (who has an enhanced healing factor thanks to his Extremis powers) with a point-blank blast through the chest. It is of lightest Iron Man armor. With the lightest armor being its predecessor, the Mark XLI Bones. It also incorporates the Mark XXXIII's energy enhancement technology which projects a slight force-field that enhances the armor and improves durability greatly. Let's build it! Marvel's Iron Man 3 - JARVIS: A Second Screen Experience Notes This armor was based on the armor with the same functionality and name in the comics, which is the Extremis Armor. Mark 42 on the Marvel Cinematic Universe Wiki. As well as be remotely called attach and unfold separate pieces around the user until complete suit is made Armor The suit is made from an advanced titanium alloy (providing high durability, hardness, compression and tensile strength), silicon infused-steel & ceramic composite armor a composition that can resist powerful attacks, including energy attacks, that can destroy normal materials. The suit is well known for its special ability to fly in separate pieces and wrap itself around Tony's body, piece by piece through 49 "state-of-the-art" computer chips that was implanted in his arms called "Micro-Repeaters", which enables him to communicate with his armor. Later, controlling the suit remotely, Tony kills Eric Savin and saves citizens falling out of Air Force One. It is based on the Mark XXIV and the Mark XXXVIII's armor, and might also be more durable and stronger than Mark XXXVIII. It was seen throughout the whole movie as Tony's main suit, and it was later destroyed by self-destruction when Tony ordered J.A.R.V.I.S. to do so, after remotely controlling it to trap Aldrich Killian within it to blow him up and finish him for good. It was able to destroy two out of three helicopters but was heavily damaged. This is the reason why Tony Stark had solely relied on it in Iron Man 3 making it the noticeable capability of this armor. It is initially available for use in the start of the game, having a x1.0 Score Multiplier but then gets damaged after one short run of an instructional game to teach the player how to play, so the Mark III replaces the Mark XLII while it is being repaired. So with all these facts, the Mark XLII can be equipped with rockets, striker missiles, machine guns, grenades, fold-able cannons (possibly on the shoulder plate, like Iron Patriot), portable lasers, micro-repulsors (like that of the Comic Armors), shoulder-mounted guns (like that of Mark VI), repulsor-based weapons, electric fields, proton-based lightning charges, flamethrowers (maybe), sonic distrutors (like that of the Peacemaker), battle blades (like that of Silver Centurion), cryo blasters, Plasma-based laser projectors, tranquilizer rounds, syringe-like projectiles, crowd-control weapons, Unibeam Projection Systems, pulse bolts, elemental weapons, AA-based projectiles, frost charges, energy-concussive rays and other unknown weaponry that the Mark XLII can be possibly equipped with. The suit with the Iron Patriot art.Mark XLII (Left) Iron Patriot (Right)Mk XLII From Spider Man HomecomingAnother Better look at Mk XLII References There are no References to display. It can also travel fast underwater. Flight The repulsors on its leg are stronger allowing it to travel into space. It served as a prototype for Mark XLIII which could be found in Avengers : Age Of Ultron. Spider-Man: Homecoming Considering it was the "Prodigal Son", Stark reassembled the Mark XLII sometime later and kept it in Avengers Tower. Unlike the other Iron Man armors as of Iron Man 3, the Mark XLII does not contain its own Arc Reactor due to its piecemeal design. Whereas the areas with Red plating from its former armors are now covered with the gold ones and the same style goes with the Red plates of the armor. Its appearance and design is reversed from the original design of the former armors. The suit used a directed energy reactor, focusing its power and channeling it through to the suit's appendages and weapon systems, giving it enhanced speed, strength, and firepower. Armor Capabilities Prehensibility The Mark XLII has prehensile technology, allowing it to attach to Tony when controlled by his nervous system. We have done many interesting projects with 15 years of 3D modeling background and experience. Lego Marvel Superheroes The Mark XLII is a playable armor in the game. Gallery A maximum of 12 IMAGES ONLY can be displayed in this Page's Gallery.If you wish to Add More Images on the topic or View the Full Gallery of the page, click here. Other Weapons: The Mark XLII's weaponry systems can also be composed of the following, based from the fact that the Mark XLII's armament was based on all the armors that precede it. After that, you need to go to the circle, and then the Mark XLII's pieces fly over, and they attach to Tony stark, replacing the Mark I, like upgrading however. Armor Design The Mark XLII has a unique and special design. The much more powerful Electromagnets are the results of the armor's Enhanced Directed Energy Reactor, the feature first conceived on the Mark XXXIII. Any action done by Stark is imitated by Mark XLII if he connects with it. As Stark was moving the Avengers stuff from the Avengers Tower to the New Avengers Facility, the Mark XLII was one of precious items on the Stark cargo plane, but the suit is only a prototype so flight systems did not work 25% of the time. This suit can also fly at very high altitudes without ice building up, because (like all previous armors) it is also based on the Mark 3 which is the first armor to solve the icing problem. When the Mandarin attacks Tony's home, Tony controls the suit to wrap around Pepper until she made it safely out of the house. This entry was posted in Marvel Comics, Paper and tagged Helmet, Iron Man, Mark IVII, Mark42, Marvel. The armor incorporates an adaptive pressure modification system which regulates internal strength, giving it underwater and sub-orbit capability. Lego Marvel Superheroes The Mark XLII is a playable armor in the game. Other Media Iron Man 3 - The Official Game Pre-released with the game. The Mark XLII should be in the character collection once you complete Level 5. Outnumber them, when there's no one left, use the shield to the shield switchers, once there's two of them authorized. Light Gold is the dominant color of this armor. This makes the Mark XLII's repulsors the strongest out of any of its predecessors. External Links Mark 42 on the Marvel Wiki. The armor's ceramic and silicon infused plates allows it to retract and expand over the user's body. Please contact info@do3d.com for any service inquiries. Missiles: The armor is equipped with a very powerful missile on each forearm. Once solved, the Virus has been disabled, rebooting Jarvis' system, and then deactivates it. This is a unique feature in Iron Man 3 - The Official Game App. Flares: The armor also contained numerous infrared flares, another feature common with its predecessors. It is then used to trap Aldrich and self destructs on Tony's orders but since the suit is still in prototype and is extremely low on power and energy- it fails to kill him. Self-Repair The Mark XLII is capable of sustaining Self-Repair without using mechanical or electrical equipment through the use of an advanced Built-in Repair System which previous armors don't have. The user can also control what the armor latches onto (namely, another user). The Mark XLII is unlocked. It's time to build it, for 385,000 Stark Credits. I am pleased to announce the imminent arrival of your bouncing badass baby brother." Tony: "Mark XLII, Autonomous Prehensile Propulsion Suit test, initialize sequence. The suit has incredible damage resistance, thanks to the advanced Titanium alloy and its perforated steel-ceramic frame. This is proven in Iron Man 3, wherein Tony Stark saves more than 10 people through the use of his Electromagnets. History Before Iron Man 3 Tony Stark creates the prototype version of the prehensile technology system after testing the separate functional capabilities on the Mark XLI. It has a circular-shaped Unibeam with a white glow, and has a thinner appearance than a regular Iron Man Armor. Good evening, and welcome to the birthing suite. The Mark Repulsors are ultimately enhanced through this technology. In the movie Iron Man 3, the Mark XLII was in its prototype phase even though it was able to halt the biggest Extremis attacks as seen in the film. However, in Iron Man 3, the suit didn't seem water-resistant. Do you want to fly this armor? This incredible durability might be based on earlier armors, like the ability to resist extreme heat, like the Mark XXIII, gamma radiation and electrical surges, like the Mark XXVI, bio-hazards, radioactivity (gamma and nuclear, like the Mark XXVIII) and chemicals, like the Mark XXXV and other potentially fatal conditions. Plasma-Penetration Unibeam The Mark XLII's Vibranium Arc Reactor II and Plasma Projector made the Unibeam of this armor penetrable on any wall. Unibeam: The armor has a very powerful plasma-penetration unibeam. We can help you make anything related to 3D modeling or 3D printing. It is hit by a truck and is knocked into pieces, but is somehow later put back together and arrives at the docks to aid the other suits in killing Killian, but hits a pole and falls into pieces. Unlike most of its predecessors, the Mark XLII does not feature the usual Red and Gold plating, but instead has darker hue for the red plating and a lighter color for the golden plating. x1.0 (initial)x7.0 (full) 385,000 564 27 hours, 56 mins, 59 seconds Showcasing prehensile tech known as the "call and response system," this armor is designed for maximum agility and features a built-in repair system. It can flexibly open itself to allow Tony to enter and exit the suit and automatically wrap or unwrap itself around him, anywhere at anytime, much like the other newly built Mark suits'. Remote Command The Mark XLII also features the unique ability to control itself when Tony Stark isn't inside his suit or when Mark XLII is A.I.-deactivated. In Iron Man 3 - The Official Game, it is the 2nd strongest armor in the Striker Missile category, and is the 8th strongest armor in the game, having a x7.0 Score Multiplier. Not surprisingly, Tony finds his own meaning of life using this suit. The Mark XLII's game info. The Mark XLII is the first armor to feature more Gold plating than red, other than the usual Red and Gold plating style. This feature is also showed in Iron Man 3 movie when tony plugs the suit up to a battery charger after crashing it to let it recharge and repair Advanced Repulsion The Mark XLII is upgraded with high-penetrating Repulsors that are much larger in cohesive size than most other armors. It can travel far into space because of the technology of the Mark XX which makes it use less energy. This is because the armor is strong enough to withstand cold temperatures, radiation and the low pressures in space. Tony later uses it to escape from Trevor Slattery's house and deal with his guards. Wait a moment and try again. The Mark XLII was one of the many suits that could be seen in the Iron Man 3 movie theatrical poster, being worn by Tony, along with the Marks XVII, XXIV, XXXIII, XXXIX, and XLI. This is because the armor was damaged, which allowed water to seep through. To get this armor, it is located at the room where a big hologram head appears, this implies that could be J.A.R.V.I.S., then the player suddenly gets attack by Killian's armies.
